NETWORK SECURITY AUDIT CHECKLIST

AIM

To perform a network security audit by creating audit questionnaires and checklists to evaluate the security posture of two IT companies.

PROCEDURE

1. Define audit scope and identify threats.
2. Review company security policies.
3. Inspect data safety and service configurations.
4. Examine training logs and monitor logs for vulnerabilities.
5. Test internet access safety and conduct penetration testing.
6. Share results and conduct regular audits.

Sr. No.	Audit Questionnaire	Document available Yes/No.	Comments
	Physical Security		
1	Do you have policy that addresses the physical security of the Data Center?	Yes	
2	Do you maintain register for entry/exit to data center? Is it records the purpose to visit the data center?	Yes	Access logs are maintained
3	Do you have electronic access control (Swipe Card) mechanism for entry/exit to data center?	Yes	
4	Do you take access control review, at what frequency?	Yes	Quarterly Review
5	Do you allow the temporary access to data center? Is it recorded? Do you remove the temporary access as soon as work gets completed?	Yes	Revoked post work
6	What process is followed if any new person visit the data center? Do you escort the person visiting data center?	Yes	Visitors escorted at all times.
7	Do you have control on door automatic lock? (Audio / visual alarm if door open for more than specified period or signs on both sides indicating it is to be closed and locked and contact to notify if it is found unsecured)	Yes	Doors have alarms and auto-lock feature
8	Security camera has been installed to monitor the data center? Check for, Security cameras Monitored by, Recording period Recording media Retention period Administered by	Yes	Cameras monitored 24/7, recordings stored 30 days

	Environmental and Electric control		
1	Does data center has an adequate and safe fire-suppression system with associated detectors (Heat, Smoke, and Temperature monitor)?	Yes	Installed and functional
2	When it was last tested? Smoke alarms - Test report Temperature monitoring system - Test report Fire extinguisher - Check expiry date. or Fire control system (Inert gas) - Test report	Yes	Tested annually with document reports.
3	Does the data center have redundant cooling system?	Yes	backup cooling maintained
4	Do you standard checklist for testing? Is the procedure documented?	Yes	
5	Do you have UPS system to backup your data center electricity?	Yes	
6	Do you have updated details on Current electric load capacity of data center?	Yes	1-hour full-load backup
7	What is the backup capacity of UPS System?	Yes	semi annually
8	When was the last UPS system tested? (Please check the test report)	Yes	quarterly

	Change management		
1	Do you have change management policy? Is it addresses the process to be followed for changes in the data center?	Yes	formal policy
2	Do the changes in data center documented?	Yes	all change logged
3	What is the review mechanism for change management?	Yes	monthly change advisory
	Inventory control		
1	Do you maintain the inventory of assets in data center?	Yes	centralized
2	Is the inventory of assets in data center are up to date?	Yes	updated monthly
3	Do you review asset inventory in data center? At what frequency?	Yes	reviewed quarterly
4	Are all the assets in data center are properly labeled?	Yes	all assets tagged and labelled
5	Do you have contact details of vendor for relevant systems in data center in case of an emergency?	Yes	critical vendor contracts
	Incident Management		
1	Does your company have an Incident Management policy?	Yes	
2	What methodologies are being adopted for Incident Management?	Yes	ITIL-based approach
3	Are management responsibilities and procedures established to ensure quick, effective and orderly response to information security incidents?	Yes	
4	Are the roles and responsibilities defined for incident management?	Yes	
5	Are the incidents documented and reported?	Yes	mandatory
6	Root cause analysis done to avoid the same?	Yes	

7	Do you have emergency procedures for a. Instructions for shutting off utilities. b. Instructions for powering down equipment. c. Instructions for activating/deactivating d. fire suppression equipment. e. Personnel evacuation. F. Security valuable assets.	Yes	
	Disaster recovery/Continuity management		
1	Do you have Disaster Recovery plan in place for Data center?	Yes	
2	Are all the processes documented in case of Disaster Recovery?	Yes	
3	Does the Disaster Recovery Policy addresses the following: Specifies roles and responsibilities relative to planning, testing, oversight administration, and accountability	Yes	roles clearly assigned
4	At what frequency do you test the Disaster Recovery site?	Yes	twice yearly
5	Are test reports documented and approved from concern manager?	Yes	

RESULT

Thus, a prepared detailed network security audit checklist, identified security gaps, and suggested improvements to strengthen network security at the two companies.
